Agentic Image Editor

Hackathon challenge | 17 October 2026 | Cruxlabs, Bangalore

Problem statement

Designers create many kinds of branded images. They must follow rules for fonts, colors, layouts, and approved assets. They may start from a blank canvas, edit an existing design, or use references for inspiration. Doing this by hand in an image editor takes time and makes it easy to miss a brand rule.

What to build

Build an AI copilot that works inside an image editor. It should help designers create new images, edit existing designs, and make new designs inspired by references. The copilot should follow the brand guidelines, use the asset library, and make its work on an editable canvas so designers can review and adjust it.

Example

“Create 4 different images like this.”

Reference recreations	View reference examples

Provided AI access

We will provide DeepSeek via Azure for the copilot and GPT Image Flare for image generation.

OpenAI API key for Image Generation	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
DeepSeek-V4-Pro (DeepSeek via Azure)	**Base URL:** `https://crux-hackathon-swe.openai.azure.com/openai/v1/` **Model:** `DeepSeek-V4-Pro` **API key:** `BwnWeepGkh2YVGGR5xdiRXxKB9puwJajrwsgj21JEuTB8eeBAW0FJQQJ99CJACfhMk5XJ3w3AAAAACOGq4Yi` **Limit:** 5M tokens/min, 5,000 requests/min (shared by everyone)
DeepSeek-V4.1-Flash (DeepSeek via Azure)	**Base URL:** `https://crux-hackathon-eus2.openai.azure.com/openai/v1/` **Model:** `DeepSeek-V4.1-Flash` **API key:** `EVecq81vLqyBzQD9UCrtOkPtcIApb4zuaEXMNjPt6AMUYe7jedgKJQQJ99CJACHYHv6XJ3w3AAAAACOGO3NZ` **Limit:** 5M tokens/min, 5,000 requests/min (shared by everyone)
How to call	Both endpoints are OpenAI-compatible: use any OpenAI SDK, set base_url to the Base URL and api_key to the key, and pass the model name as model. See the example below. A 429 error means the shared per-minute limit was hit: wait a few seconds and retry. Keys are temporary and will be revoked after the event; do not commit them.

Python example

```
from openai import OpenAI

client = OpenAI(
    base_url="https://crux-hackathon-swe.openai.azure.com/openai/v1/",
    api_key="<API key from the table>",
)
resp = client.chat.completions.create(
    model="DeepSeek-V4-Pro",
    messages=[{"role": "user", "content": "Hello"}],
)
print(resp.choices[0].message.content)
```

Judging criteria in priority order

1	Output quality
2	Code understanding and system design
3	Execution speed and number of features
4	UI/UX flow
5	Presentation
